### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoon (U.S. Pat-5978589).

Regarding claim 11, Yoon teaches a system for sharing a program in a mobile communications system having a control unit and a plurality of target boards (fig.1, master processor 2, col.1, lines 13-24), comprising:

wherein the control unit stores an execution file compiled to contain program code to operate each of the plurality of target boards according to a target board identification (ID) (fig.1-2, master processor 2, processor 0, processor 1, ...processor n, col.1, lines 13-24, col.2, lines 30-42), and

the control unit includes a main processor (fig.1, master processor 2, col.1, lines 13-24) for:

executing the execution file for operating the plurality of target boards (fig.1-2, master processor 2, processor 0, processor 1, ...processor n, col.1, lines 13-24, col.2, lines 30-42);

reading the target board ID of each target board (fig.1-2, master processor 2, processor 0, processor 1, ...processor n, col.1, lines 13-24, col.2, lines 30-42); and

initializing target board hardware according to the target board ID (fig.1-3, master processor 2, processor 0, processor 1, ...processor n, col.1, lines 13-24, col.2, lines 30-42).

Regarding claim 12, Yoon teaches the system of claim 11, wherein the main processor:

Initializes an operating system (OS) for each target board using the target board ID (fig.1-2, master processor 2, processor 0, processor 1, ...processor n, col.1, lines 13-24, col.2, lines 30-42); and

Branches into a sub-routine for each target board according to the target board ID (fig.1-2, master processor 2, processor 0, processor 1, ...processor n, col.1, lines 13-24, col.2, lines 30-42).

***Allowable Subject Matter***

4. Claims 1-10 are allowed.

Applicant's independent claims 1, and 6: The present invention is directed to a method of sharing a program using target board identification (IDs) in a mobile communication system as defined in the specification (paragraph 0014-0020). Each independent claim identifies the uniquely distinct feature "a main processor a target board ID of each target board; initializing target board hardware according to the target board ID, and initializing by a main processor an operating system (OS) for each target board using the target board ID; and branching by a main processor into a sub-routine for each target board according to the target board ID and executing by a main processor an application program for the target board, and storing by a main processor a master execution file in a memory, said master execution file compiled to contain program code to operate a plurality of target boards of the mobile communication system, said main processor apart from said plurality of target boards". Applicant's independent claims 1, and 6 comprise a particular combination of elements, which is neither taught nor suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."
